PROFESSIONAL SUMMARY

Fullstack & DevOps software engineer with 4+ years of experience (since 2022) building and operating **mission-critical platforms** for the public and financial sectors. Specialist in systems integration, microservice architecture and **application security** — from the central microservice that interconnects multiple government agencies' systems to transaction engines and digital-payment identity verification. I take end-to-end technical ownership — architecture, implementation, deployment and monitoring — while leading modules and teams. I apply an **offensive-security mindset** to development (penetration testing, authentication hardening with LDAP/MFA, and traffic analysis) to deliver systems that are resilient by design. Key results: platforms scaled to **20,000+ users in six months**, banking integration now processing **80% of a university's revenue**, and the replacement of external identity-verification vendors with an in-house module. Experience across government, fintech and e-commerce environments, on national and international projects (Kenya and Australia).

TECHNICAL SKILLS

Back-end & APIs	Python (Django), Java (Spring Boot), Node.js (Express), NestJS, Golang · RESTful & GraphQL APIs · microservice architecture · systems integration
Front-end	JavaScript, TypeScript, React, Next.js, Vue.js, Quasar, HTML5, CSS3
Mobile Development	React Native, Flutter
DevOps & Infrastructure	Docker, CI/CD pipelines, Git, Linux servers, AWS (EC2, S3, Route 53), production monitoring
Databases	PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase
Security & Penetration Testing	Security testing & financial-systems auditing · traffic analysis (Wireshark) · web-application testing (Burp Suite, OWASP Top 10) · wireless security (aircrack-ng) · authentication hardening (LDAP, MFA, SSO) · authorized phishing simulation · regulatory compliance
Telecommunications	Asterisk PBX, VoIP
Business Domains	Transactional financial systems · government systems integration · digital identity verification · Monitoring & Evaluation (M&E)

PROFESSIONAL EXPERIENCE

Software Engineer — DevOps & Systems Integration

Partner Link, Lda. · Full-time · Maputo, Mozambique

Aug 2025 – Present

- Architecture, development and deployment of **mission-critical corporate and government platforms**, integrated across multiple state agencies.
- Owned the redesign and evolution of the **Corporate Suite** — the central microservice interconnecting every system in the ecosystem: finance, tasks & meetings, processes, Monitoring & Evaluation, and HR.
- Technical lead for the tasks & meetings, financial management and corporate-mobility modules.
- Designed and built the **tasks & meetings system**, with **real-time communication over WebRTC** (audio/video) and **native-model AI** mechanisms for **automatic transcription of meeting minutes**.
- Defined the **institutional integration standard**: every new system now plugs into the suite, eliminating point-to-point integrations and accelerating go-live.
- Designed the cross-cutting DevOps layer: Docker containerization, CI/CD pipelines, Linux server management and production monitoring.
- Architected a **government telephone exchange** with Asterisk PBX and a Node.js admin panel, replacing manual call handling and routing.
- Adopted AI-assisted development (multi-agent orchestration) for prototyping, refactoring and test coverage, shortening delivery cycles while keeping human review.

Back-end Engineer & Software QA Lead

Tribox · Hybrid · Maputo, Mozambique

2025

- Technical ownership of the server layer and quality assurance for **Paytesy**, a digital-payments ecosystem.
- Built an **in-house facial-recognition and identity-verification module**, removing dependency on external vendors (e.g. Sumsu) and their recurring cost.
- Optimized the financial transaction engine, improving efficiency, reliability and performance under load.
- Implemented automated payment scheduling, eliminating manual work and increasing operational accuracy.
- Ran **functional, regression and security tests**, ensuring stability and regulatory compliance of financial solutions.

Cross-platform Developer — Technical Lead

Dec 2022 – Present

Corner Dev · Maputo, Mozambique

- Technical lead in end-to-end development of scalable systems, growing platforms to **20,000+ active users in six months**.
- ShopKing** (multi-vendor e-commerce): **35% faster load times** with Redis and an automated commission system with **+12% revenue impact**.
- Naturali** (marketplace, Kenya): platform for 12,000+ vendors, with geolocation applied to sustainable deliveries.
- 6Valley**: technical consulting and advanced features for a multi-market e-commerce platform.

Software Development Consultant

2024 – Present

AtomTechnology · Mozambique

- Tender-management system with Django automation, **cutting application processing time by 40%**.

Infrastructure & Systems Administrator

2023 – 2024

Horizon Consulting / CPTEC · Maputo, Mozambique

- Full management of production Linux servers: monitoring, backups, **security hardening** and optimization of critical systems, with continuous availability.

Cross-platform Developer

2023

Eduardo Mondlane University — Innovation Hub · Maputo

- Integrated Own-Revenue Management System: **40% reduction in tax-processing errors**.
- Integration with local banks (BIM and BCI) via RESTful APIs, processing **80% of the university's revenue**.

Technical Web Development Instructor

2023

"Code Like a Girl" Program — Vodacom · Mozambique

- Trained **50+ women** in web development and interface design, focused on entering the tech job market.

EDUCATION

Computer Engineering (in progress) Technical University of Mozambique (UDM) · 2025 – Present	Technician in IT & Web Programming Medium & Polytechnic Institute (IMEP) · 2020 – 2023
Basic Electricity Course Medium & Polytechnic Institute (IMEP) · 2020 – 2021	

LANGUAGES & SOFT SKILLS

Languages: Portuguese (native) · English (proficient) · Changana (fluent)

Soft skills: Technical leadership · Problem solving · Clear communication · Self-directed learning
